1.Output Voltage Programming (or, PV / remote voltage programming / remote adjust / margin programming / dynamic voltage trim)

In addition to the adjustment via the built-in potentiometer, the output voltage can be trimmed by applying external voltage.

Caution: By factory default, the Output Voltage Programming is not activated, and PV(pin1) and PV-DIS(pin2) are shorted by connector. Whenever this function is not needed to activate, as assumed in other sections'diagrams, please keep PV(pin1) and PV-DIS(pin2) shorted; otherwise the power supply will have no output.

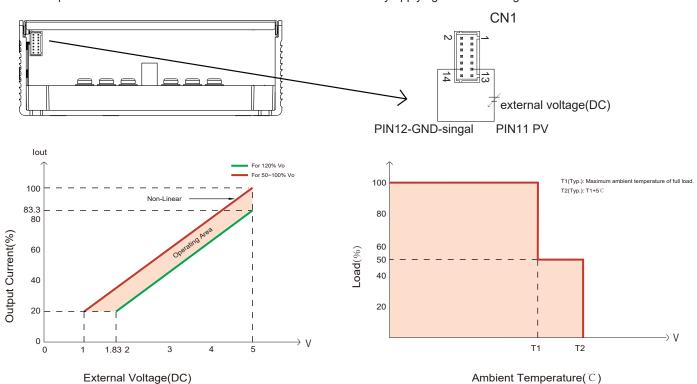

Caution: When this function is needed to activate, please keep PV(pin1) and PV-DIS(pin2) opened.

2.Output Current Programming (or, PC / remote current programming / dynamic current trim)
The output current can be trimmed to 20~100% of the rated current by applying external voltage.

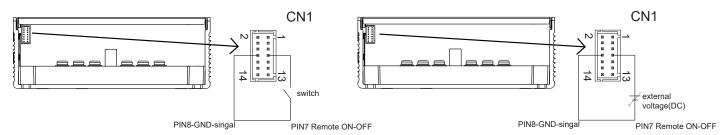

Caution: By factory default, the Output Current Programming is not activated, and VCCS(pin13) and PC-DIS(pin14) are shorted by connector. Whenever this function is not needed to activate, as assumed in other sections' diagrams, please keep VCCS(pin13) and PC-DIS(pin14) shorted; otherwise, the power supply will have no output.

Caution: When this function is needed to activate, please keep VCCS(pin13) and PV-DIS(pin14) opened. Covered by over temperature protection, auto de-rating function works under operation in PC mode.

#### Installation

1. Operate with additional aluminum plate and fan

In order to meet the "Derating Curve" and the "stalic Characlerisics", YEF1000 series must be instaled onto an aluminum plale (or the cabinet of the same size) on the bottom or apply forced air cooled solution. The size of the suggested aluminum plate and configuration of fan are shown as below. And for optimizing thermal performance, the aluminum plate must have an even and smooth surface (or coated with thermal grease), and YEF1000 series must be firmly mounted at the center of the aluminum plate.
